Re.split()

HackerRank

Check [Tutorial](#) tab to know how to solve.

You are given a string *s* consisting only of digits 0-9, commas ,, and dots .

Your task is to complete the `regex_pattern` defined below, which will be used to `re.split()` all of the , and . symbols in *s*.

It's guaranteed that every comma and every dot in *s* is preceeded and followed by a digit.

Sample Input 0

```
100,000,000.000
```

Sample Output 0

```
100
000
000
000
```

1/1

Change Theme Language Python 3

```
1 regex_pattern = r"[,]" # Do not delete 'r'.
2
3 import re
4 print("\n".join(re.split(regex_pattern, input())))
```
